SOLUTION BRIEF · FIELD ENGINEERING

AI-POWERED HR INTELLIGENCE

Hire Right Agent

Evaluate every candidate with AI — smarter scoring, faster decisions, and full auditability.

THE CHALLENGE

- HR teams spend hours manually reviewing resumes and scoring candidates across multiple dimensions without consistent criteria
- No centralized system to correlate historical hiring outcomes with candidate profile attributes
- Analytics and AI insights live in separate tools — no unified workflow from data to decision
- Hiring recommendations lack explainability, creating compliance and bias risk

KEY CAPABILITIES

→ 8-factor weighted candidate scoring with transparent breakdowns

→ AI agent answers natural language questions about any candidate

→ Semantic resume search via Vector Search for deeper context

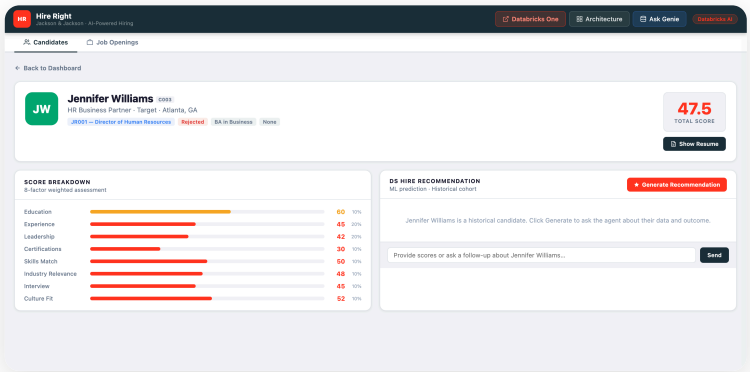
→ ML model predicts hire/no-hire from historical cohort patterns

→ Genie Space for ad-hoc analytics ("Top 5 candidates for JR002?")

→ One-click email summaries to hiring managers via agent tool

DATABRICKS PLATFORM

Databricks Apps · MLflow ResponsesAgent · Vector Search · Genie Space · Model Serving · Unity Catalog · Lakeview Dashboard · Delta Lake · MLflow · Asset Bundles



AI-POWERED INSIGHT

The Hire Right Agent combines an **MLflow ResponsesAgent** with four specialized tools — Genie analytics, Vector Search resume retrieval, ML scoring, and email — delivering explainable hiring recommendations grounded in real data, not guesswork.

20 Candidates
Evaluated across 4 open roles with consistent, auditable scoring in a single platform

8 Factors
Weighted scoring across education, experience, leadership, skills, culture fit, and more

Full Stack AI
End-to-end pipeline from raw data ingestion to agentic recommendations — all on Databricks
