

FE BAR SUBMISSION · BUSINESS VALUE BRIEF

Hire Right

AI-powered predictive hiring for Jackson & Jackson HR Digital

From raw applicant data to a governed, conversational hiring decision — one connected journey on Databricks.

THE PROBLEM

Hiring senior HR leaders is slow, subjective, and expensive to get wrong.

- ◆ **45+ days** to fill a director-level role — top candidates are gone before the shortlist is set.
- ◆ Decisions rest on **gut feel and inconsistent scorecards**, creating bias and compliance exposure in a regulated industry.
- ◆ A single **mis-hire at the leadership level costs 1.5–3× salary** in severance, lost productivity, and re-recruiting.
- ◆ Applicant data, resumes, and analytics live in **disconnected tools** — no single, governed source of truth.

THE OUTCOME — LEAD WITH IMPACT

Faster, fairer, defensible hiring decisions.

60%

Faster time-to-fill

Ranked shortlists on day one, not week six

~30%

Fewer mis-hires

8-factor ML scoring lifts quality of hire

15 hrs

Saved per requisition

Automated screening & resume Q&A

100%

Auditable & consistent

Governed scoring, masked PII, tracked notes

Projected impact for the J&J HR Digital prototype, expressed in the KPIs the CHRO and TA leadership already report on.

WHAT THE HR TEAM GETS

A decision cockpit for every requisition.

Ranked candidates

Every applicant scored across 8 weighted dimensions with a clear total & stage.

Data-science recommendation

One click runs the ML prediction and returns a hire recommendation with rationale.

Resume Q&A (RAG)

Ask about any candidate's experience — grounded in their actual resume.

Genie analytics

"Who are the top 3 for the CPO role?" answered instantly over governed data.

HR notes

Add durable, audit-trailed annotations to a candidate record — saved to Lakebase.

AI offer letter

One click drafts a salaried offer letter and sends it via the agent's mailer tool.

HOW IT WORKS

One connected journey — data to decision on Databricks.

End-to-end on Databricks — data to decision.

A governed medallion, ingested with Lakeflow.

Governance you can see — PII masked in place.

- ◆ Phone & email tagged as PII in Unity Catalog with sensitivity levels.
- ◆ Dynamic column masking — non-admins only ever see ***-***-0505.
- ◆ Lineage & data-quality tracked end-to-end, Bronze→Gold.

The same governance that protects candidates makes every hiring decision auditable.

TECHNICAL • OPERATIONAL SERVING

Lakebase turns the lakehouse into an app backend.

Synced tables

Gold candidate & job tables synced Delta→Postgres for millisecond, app-facing reads.

Transactional notes

A native `candidate_annotations` table captures HR notes, joined to candidate data.

Powers the app

Candidate cards, job views and notes all served from Lakebase — a snappy UX.

Secure by default

The app connects with short-lived OAuth credentials, governed in Unity Catalog.

Three models, tracked and compared in MLflow.

- ◆ LogReg, Random Forest & Gradient Boosting trained on the scoring features.
- ◆ Every run logged to MLflow — metrics, params & datasets, fully comparable.
- ◆ Best model promoted to **@champion** and served on a scale-to-zero endpoint.

The agent works in the open — live tool calls.

- ◆ A ResponsesAgent orchestrates tools: Genie, resume RAG, ML scoring, email.
- ◆ Tool calls **stream live into the app** — HR watches each step complete.
- ◆ Grounded in governed data, so every answer is explainable.

Every agent run is traced and evaluated.

- ◆ MLflow tracing captures each tool call, token count & latency.
- ◆ LLM-as-judge scores tone & consistency before the agent ships.
- ◆ Full observability for debugging and production monitoring.

One workspace HR actually wants to use.

- ◆ Ranked candidates, 8-factor scores and a one-click DS recommendation.
- ◆ Resume viewer, Genie Q&A, HR notes and AI-drafted offer letters.
- ◆ Served fast from Lakebase — a single, governed HR cockpit.

WHY DATABRICKS

Data, AI, and the app — on one governed platform.

- ◆ **No integration tax:** ingestion, governance, ML, Gen AI, analytics, and the app all live together.
- ◆ **Lakebase** turns governed lakehouse tables into a low-latency application backend — no separate database to sync and secure.
- ◆ **Unity Catalog** governs data *and* AI, so the whole solution is auditable end-to-end.
- ◆ **Faster to value:** this entire prototype was built as one connected journey, not stitched from point tools.

THE ASK

Let's hire right, together.

A working, governed, AI-powered hiring solution — ready to pilot on a live requisition and prove the numbers on your data.

- ◆ Pilot on one open role and baseline time-to-fill & quality of hire
- ◆ Extend the model and Genie room to your historical hiring data
- ◆ Roll the app out to the TA team behind Unity Catalog governance
